

# Assembling the EarthStar Globe is Fun

You will need tape (preferably transparent tape). Expect assembly to take about 20 minutes.

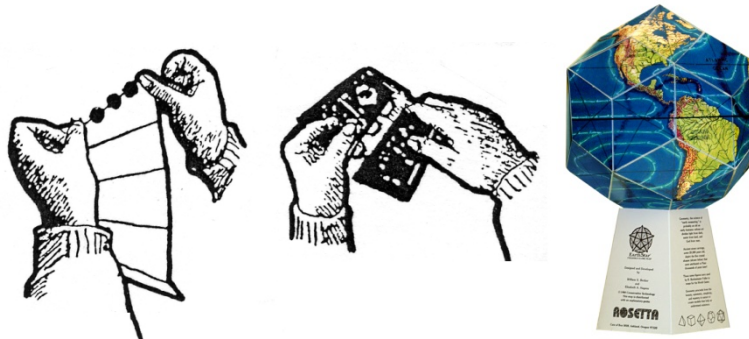

1. Crease the folds embossed into the EarthStar Globe.
2. Place the map face down on a flat surface such as a table top.

3. Begin taping together the edges of the map. Apply the tape on the inside, so it doesn't show.

4. The last diamond of the globe is attached on one side. Place three pieces of tape on the inside of each of the last three edges and gently press the diamond down to make a secure, invisible closure.

5. To assemble the stand, tape the left and right vertical edges together. Display and enjoy!
